

(a) Natural same-character pair

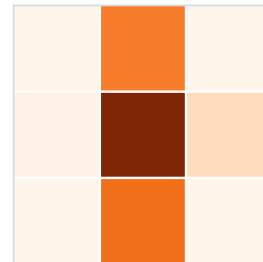

(b) Aligned silhouettes

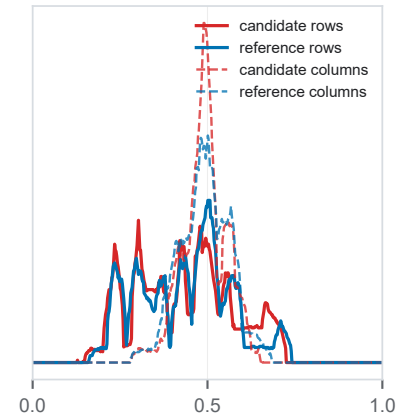

(c) Polar occupancy
JSS=0.809

(d) 3 x 3 occupancy
JSS=0.940

(e) Projection profiles
JSS=0.828

(f)

$$S_{\text{ASDS}} = 100(0.70s_p + 0.15s_g + 0.15s_{\text{proj}})$$

Example ASDS = 83.1

Human mean = 3.33/5
parsed - direct = +0.344

(g) Paired direct-ink ablation on the same 150 rated pairs

Parsed-union ASDS

rho = 0.55623

B2 five-direction union

Direct-ink ASDS

rho = 0.55583

thresholded source raster

Paired difference

delta rho = 0.00040

95% CI [-0.01011, 0.01030]

Score association

rho = 0.9973

parsed versus direct score vectors

Result: the scalar descriptor is silhouette-based; parsing is retained for direction, overlap, and endpoint evidence.
